

TÍTULO DA TESE EM INGLÊS: The impact of Collaborative Journalism in the practice of today's profession - Comparative analysis of ICIJ platforms, Investigate Europe and Connectas

ABSTRACT

The present study carried out a comparative investigation of three projects of three organizations of collaborative journalism: The Panama Papers, of the International Consortium of Investigative Journalists (ICIJ); Microsoft, of Investigate Europe; and “*América Latina, Región de Carteles*” by Connectas. In order to understand the impact of these organizations on the media market, their commitments and practices, the present study carried out a two-stage analysis: seven qualitative semi-structured interviews in depth, and quantitative content analysis of 10 pieces of news from each of the projects. Some results obtained are that collaborative investigative journalism organizations are more than platforms, they publish, teach, capture resources for themselves and their own investigations, as well as often owning their own teams. Collaborative journalism organizations are non-profit media organizations that, because they are smaller, more agile and flexible, and mainly producing more and better investigations and high-quality information, have been more effective in conducting large-scale investigative journalism, and more efficient in raising funds from a variety of sources.
